

CONCEPT DIRECTION · JUBO × RPPG · B2C

Your body feeds a living creature

Meet **Bobo** — a gamified wellness companion where real health signals, a face scan, your steps, your sleep, your mood, are the fuel that helps it grow. Show up for yourself, and it blooms.

Real health actions are the fuel

Every input is something genuinely good for you. Nothing is gated behind waiting or paying — you feed the creature by taking care of yourself.

Daily measurement 主要燃料

The 10-second face scan. Your unique, defensible core — so it gives the biggest payout. The reading shapes the creature's mood: calm, energized, or tired.

Primary

Activity & sleep 次要燃料

Steps, calories and sleep, read passively from Apple Health — accruing even when the app is closed. Your ordinary day quietly grows the creature.

Secondary

Mood & breathing 心靈燃料

A one-tap mood check-in and optional breathing exercise. Gentle and shame-free — a low mood brings the creature's care, never its disappointment.

Tertiary

The fuels are substitutable, not all required. A good day can come from a scan *or* a walk *or* a mood check-in. No single action becomes a chokepoint — which is exactly what keeps it gentle for elderly and anxious users, and clear of coercive "measure-or-else" design.

AROUND THE EDGES

Lighter daily touches

Small, optional tasks that add warmth and reasons to return — deliberately low-stakes.

Tiny AI companion

The creature reacts and offers a plain-language nudge. Kept small on purpose — a helper, not a chatbot to pour your heart into.

Family check-in · 安心

One gentle daily touch. An adult child sees "mum scanned and walked — her creature is happy." Jubo's eldercare world, made warm.

Read a health article

A short daily read, curated by Jubo. Adds a touchpoint, real credibility, and a natural content-partnership seam.

PROGRESSION

One creature to bond with, a cast to collect

A hybrid that keeps Finch's warmth and adds Mindllama's "collect them all" pull — without the loot-box trap.

THE BOND

Bobo grows with you

One companion you raise continuously. Bobo reflects your real state day to day, remembers your streaks, and deepens the longer you show up. This is the emotional anchor — the reason to come back tomorrow.

THE COLLECTION

Unlock new characters

Consistency and streak milestones unlock a growing cast of collectible creatures. Earned by showing up — never bought from a loot-box. Money, if any, buys only cosmetics.

Characters are earned through **consistency**, not cash. The health data is never held hostage — you're rewarded for care, never punished for a missed day.

THE CORE LOOP

Live your day → the creature thrives

↻ a gentle flywheel: more care → a happier creature → more reasons to care

What keeps it healthy, not manipulative

The same mechanics that drive retention can tip into harm. These are the lines the design holds.

✗ Not Candy Crush

No engineered frustration. Measurement earns energy — it never gates it. You're never locked out of your own health data to force a return.

✗ Not a companion trap

The AI stays deliberately tiny — a reactive creature, not an attachment-maximizing chatbot. That keeps it clear of the regulatory heat around companion apps.

✓ Pikmin-gentle

Passive accrual and no punishment for lapses. The creature waits patiently — the model wellness-retention research actually rewards.

✓ Wellness, not medical

rPPG readings are framed as screening-grade trend-tracking with cuff confirmation — a consumer product, never a diagnostic device.

Jubo Bloom — a creature-growth wellness app fueled by real health signals
